

## QUESTION 1

```
1  """
2      CS20B1097 HIMANSHU
3
4      1) Convert the given Lena image to grayscale image. Use the cv2.resize() to down sample
5      the image with 4 sizes (128*128, 64*64, 32*32, and 16*16). Display the original image,
6      and down sampled images with the same display size. Observe what happens.
7  """
8
9  import cv2
10
11  img = cv2.imread('../Lena.png', 0)
12  cv2.imshow('Original Image', img)
13
14  height, width = img.shape[:2]
15
16  for i in range(4):
17      res_img = cv2.resize(img, (16*(2**i), (16*(2**i))), interpolation=cv2.INTER_CUBIC)
18      cv2.imshow(f'({16*(2**i)}, {16*(2**i)})', res_img)
19
20  cv2.waitKey(0)
21  cv2.destroyAllWindows()
```

## QUESTION 2

```
1  """
2      CS20B1097 HIMANSHU
3
4      2) Down sample the grayscale Lena image with 8 different intensity ranges of values (0-
5      255, 0-128, 0-64, 0-32, 0-16, 0-8, 0-4, and 0-2). (Note: Size of images are the same).
6      And display all those 8 downsampled images in the same size display area on the
7      screen. Observe what happens.
8  """
9
10 import cv2
11 import numpy as np
12
13 img = cv2.imread('../Lena.png', 0)
14 cv2.imshow("Original Image", img)
15
16 max = np.max(img)
17 min = np.min(img)
18
19 img = (img - min)/(max - min)
20 new_img = np.uint8(img*255)
21 cv2.imshow("Image with Intensity range (0-255)", new_img)
22 for i in range(7):
23     range = int(128/(2**i))
24     new_img = np.uint8(img*range)
25     cv2.imshow(f"Image with Intensity range (0-{range})", new_img)
26
27 cv2.waitKey(0)
28 cv2.destroyAllWindows()
```
